MV Fredericia

An opportunity for UK growers to grow a top quality Group 1 milling wheat with a guaranteed market.

- + **Early-maturing, high-quality** bread making wheat from Hungary – tested within the Agrii trials programme for the last four years
- + **MV Fredericia is part of** Glencore's Group One Milling Wheat Buyback Portfolio
- + **Guaranteed** minimum premium available

As a very **high quality home-grown grain**, MV Fredericia represents an opportunity for the UK's domestic high protein wheat requirement to be met by UK growers – providing growers with some protection from Brexit-related uncertainties. It provides an alternative to growing feed wheat for export, as well as helping to reduce the carbon footprint of UK food production.

"MV Fredericia was nice to combine, produced great straw and is extremely competitive against blackgrass. I would highly recommend anyone having blackgrass issues to give it a go. MV Fredericia out-yielded the G1 variety we grew and was on a par with a G4 hard wheat."

Charlie Tomkins, D T A Tomkins, Bedfordshire

"I have found MV Fredericia a consistent performer. It was drilled end of October and harvested end of July. It yielded 7.4 t/ha, outperforming a conventional variety in the second wheat position. Easy to grow and combine."

Bob Chapman, R & L Chapman, Peterborough

MV Fredericia

Agri intelligence

An opportunity for UK growers to grow a top quality Group 1 milling wheat with a guaranteed market.

“We have done trial work with MV Fredericia over the last three years; it shows all the characteristics of a good NABIM G1 wheat and we will be using it in our Mills going forward as it is more commonly grown”

Raich Growdridge, Purchasing Director, Whitworth Bros Ltd

“It’s good to see growers starting to use wheat genetics (varieties) strategically. For too long growers have been encouraged to scan the Recommended List and pick off the variety on the ‘far left’ – the highest yielding variety – in that particular NABIM group. Late sowing is undesirable but for many growers it has become a necessity – particularly for those with blackgrass problems. With a buyback contract in place there is now the opportunity to get that all important early harvest as well as picking up a quality premium. The choice of variety to grow is the most important one for cereal growers and MV Fredericia gives them a new option”

Bill Angus, Angus Wheat Consultants

KEY AGRONOMICS:

- + Very good grain quality** with protein above 13%, extremely high specific weights, HFN comfortably above 350 and good dough characteristics, meaning Fredericia has attracted interest for wholemeal flour.
- + MV Fredericia’s late-drill** suitability makes it an ideal choice after potatoes and sugar beet, or in high grassweed situations, as its fast speed of growth gives it a very good competitive edge.
- + Early maturity** makes it an ideal entry crop for OSR.
- + Good** foliar disease resistance.
- + Requires a robust PGR** programme especially in more fertile situations.

Interested in an MV Fredericia Buyback for Harvest 2021?

For more information on how to access the MV Fredericia agronomy programme and buyback, please get in touch with **your usual Agrii or Glencore contact**.

Alternatively please call **Glencore on 01844 261261, Agrii on 01277 898202**, or email us at **thame.oration@glencore.co.uk** or **info@agrii.co.uk**.
